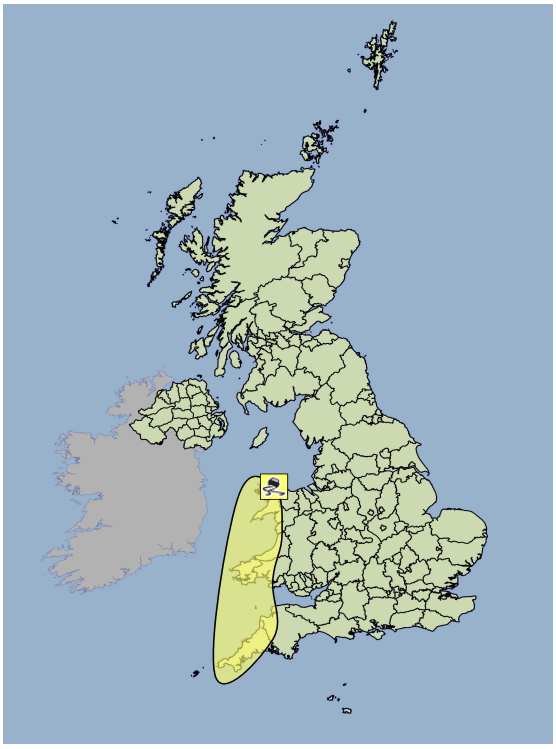
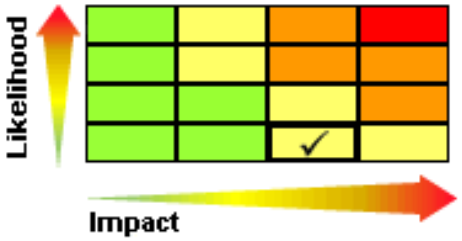
National Severe Weather Warning Service





Chief Forecasters Assessment
Wintry showers look like lasting a few hours yet, as for example across parts of southwest Wales at present, where inland areas are still seeing some snowfall. The flow turns to the northeast eventually, taking the bands of showers offshore but then clearing skies are likely to increase the ice risk quite quickly.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **14:10 on Mon, 02nd Feb 2015** until **10:00 on Tue, 03rd Feb 2015**

Wintry showers will continue this afternoon, still bringing the risk of localised falls of snow across parts of west Wales and perhaps the higher ground in Cornwall during the daytime, although most places will escape the snow. However as showers tend to move offshore this evening, this then brings a more widespread risk of ice on untreated surfaces.

The public should be aware of the continued possibility of hazardous travel conditions.
